

PEACHTREE ORTHOPEDICS

PATIENT REPORTED OUTCOME-MEASURES

YOUR VOICE MATTERS

You play a crucial role in enhancing the quality procedures at Peachtree Orthopedics. Only you can provide essential details about your daily pain, mobility, overall health, and quality of life. By sharing this information with us before and after surgery, you assist your doctor and care team in making the best decisions about your care and help us improve the experience for future patients.

HOW YOU CAN HELP

Please complete the Patient-Reported Outcome Measure surveys when you receive them through text message and email. These surveys take about 10 minutes to complete. You will receive your surveys from a platform chosen by your surgeon called PatientIQ

WHEN TO COMPLETE A SURVEY

The survey should be completed before your procedure or on the day of your procedure. The survey will be repeated after your procedure at multiple timepoints up to two years. We strongly encourage you to complete the surveys both before and after your procedure when you receive notifications to track your improvement.

HOW YOUR RESPONSES WILL BE USED

Your care team may use your survey responses to enhance the care they provide to you. Additionally, your responses will be used to calculate and publicly report data on how well patients at Peachtree Orthopedics improve after surgery. This information can help other patients decide where to seek care.

All data used for public reporting or marketing will be compliant to HIPAA regulations of protecting your private health information.
